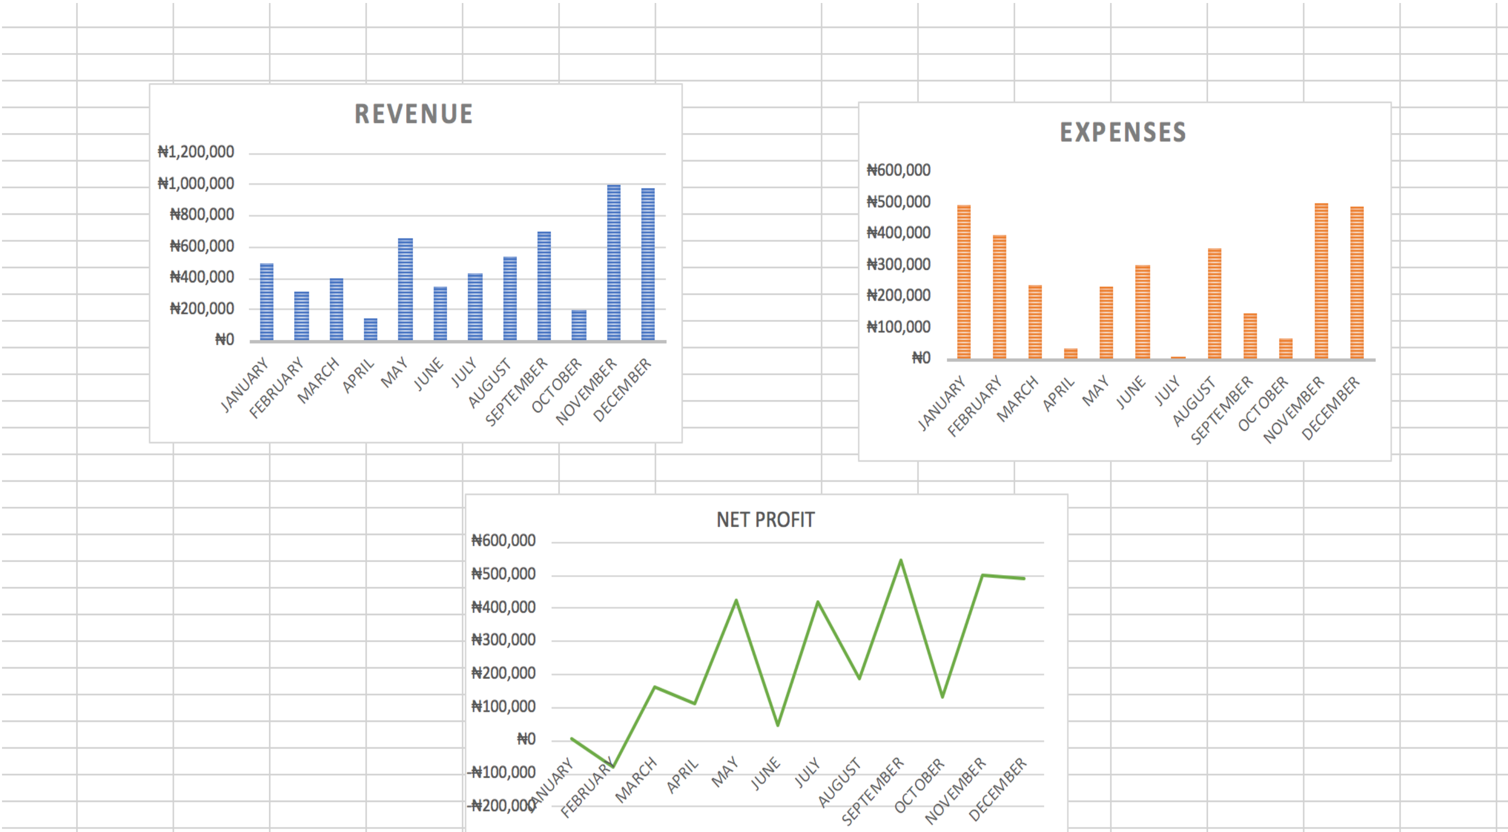
.

2023



The highest revenue was generated in **November** which dropped by 2% in **December**.

A loss was incurred in **February** as the expenses was 20% higher than the revenue. The loss was covered in **March**. With a net profit of **₦161,000.00**, the company would be able to cover up for the loss incurred in **February**.

The company had its lowest revenue in **April**, with a revenue of **₦400,000.00** in **March** i.e the company's revenue dropped by almost 64% from **March** to **April**.

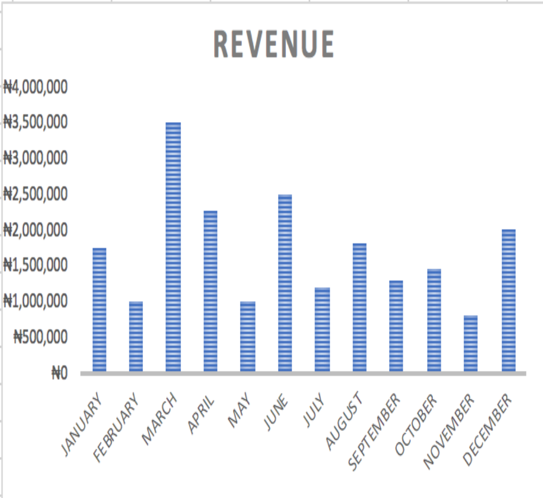
	Average	Total
Revenue	₦518,500.00	₦6,222,000.00
Expenses	₦272,750.00	₦3,273,000.00
Net Profit	₦245,750.00	₦2,949,000.00

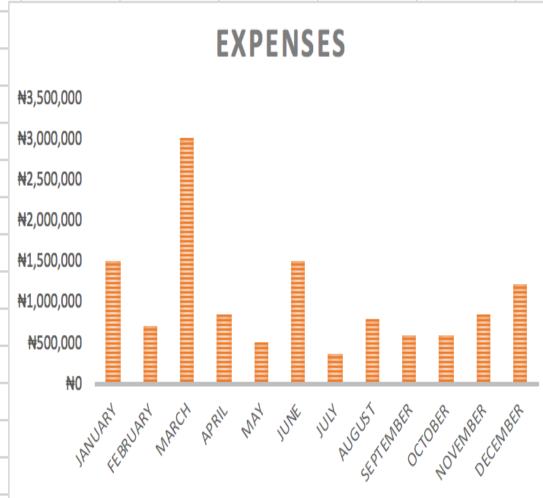
With an average revenue of **₦518,500.00** and average net profit of **₦245,750.00** in 2023, five months **(May, August, September, November, and December)** had revenues higher than the average revenue.

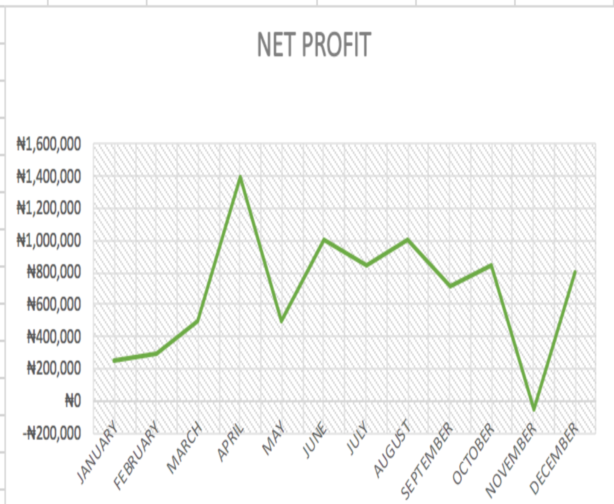
Following this, a minimum monthly revenue of **₦518,500.00** and net profit of **₦245,750.00** should be expected in 2024, regardless of the expenses.

In spite of all these, the company had an overall net profit of **₦2,949,000.00**, with a total revenue of **₦6,222,000.00** and total expenses of **₦3,273,000.00** in 2023.

2024







The highest revenue was generated in **March** (**3.5 million naira**), then **June** where a revenue of **2.5 million naira** was generated.

Due to difference in expense cost, the net profit made in **June** was two times higher than that of **March**.

April had a revenue of **2.25 million naira** which is the 3rd highest generated revenue, but the net profit made in **April** (**1.4 million naira**) was greater than the profits made in **March** and **June** respectively.

As expected, the monthly revenue in 2024 exceeded the average revenue generated in 2023.

A drastic change occurred in **November**, where the revenue dropped by % compared to **October**, leading to a loss of **₦50,000.00.**

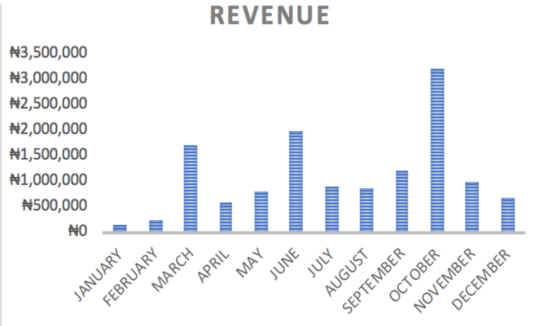
	AVERAGE	TOTAL
REVENUE	₦1,712,500.00	₦20,550,000.00
EXPENSES	₦1,035,833.33	₦12,430,000.00
NET PROFIT	₦676,666.67	₦8,120,000.00

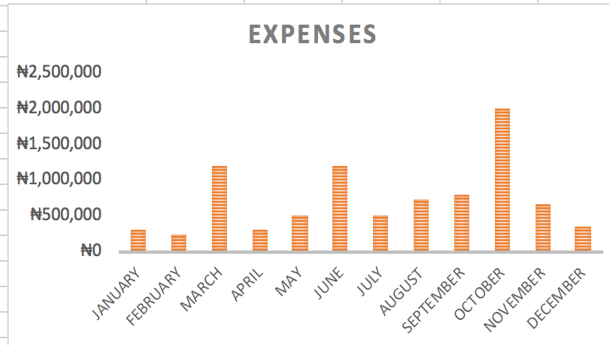
With an average revenue of **₦1,712,500.00** and average net profit of **₦676,666.67** in 2024, six months **(January, March, April, June, August, and December)** had revenues higher than the average revenue compared to 2023, where only five months had revenues higher than the average revenue.

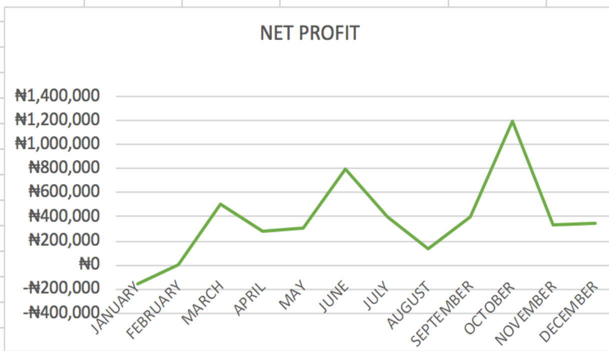
Following this, a minimum monthly revenue of **₦1,712,500.00** and net profit of **₦676,666.67** should be expected in 2025, regardless of the expenses.

In spite of all these, the company had an overall net profit of **₦8,120,000.00**, with a total revenue of **₦20,550,000.00** and total expenses of **₦12,430,000.00** in 2024.

2025







The highest revenue was generated in **October** (a revenue of **3.2million naira**) with a net profit of **1.2million naira,** which is the highest profit made in 2025.

The lowest revenue was generated in **January**, first month of the year which is not a good sign as it caused the company loss.

The company incurred losses in the first two months of the year (**January** and **February**) which alerted a huge red flag, causing the company close to being unstable. With the massive rise in revenue and net profit that was raised in **March**, the company's stability became normal again.

Despite the fact that **2025** revenue and net profit couldn't exceed that of **2024**, the company didn't incur any loss at the end of the year.

	AVERAGE	TOTAL
REVENUE	₦1,107,833.33	₦13,294,000.00
EXPENSES	₦729,750.00	₦8,757,000.00
NET PROFIT	₦378,083.33	₦4,537,000.00

SUMMARY PAGE.

Higher monthly revenue doesn’t guarantee higher monthly profit, expenses determine how much of profit would be made.

As we analyze this data, a lot of questions were raised. Some of which are;

1. What are the sources of these revenues?
2. Which source generates more revenue for the month?
3. How does each source affect the company’s monthly revenue?
4. What are the expenses?
5. Which expense is the most high?
6. How does these expenses vary monthly?

The main source of revenue for the company is the sales of products made and it generates more revenue for a company. Low demand for these products lead to relatively low sales, directly affecting the company’s revenue. Same applies to when demand is high.

Expenses like wages and salaries, rent, etc are fixed. No matter how much of the revenue made, the expenses costs won’t change. But expenses like, cost of repairing machines, cost of new equipment, vary with seasons.
